

Bagging machine is a common packaging equipment, widely used in various industries. It is mainly used to automatically put products into plastic bags, and seal and cut them. It is widely used in various industries, such as food, medicine, chemical industry, etc.

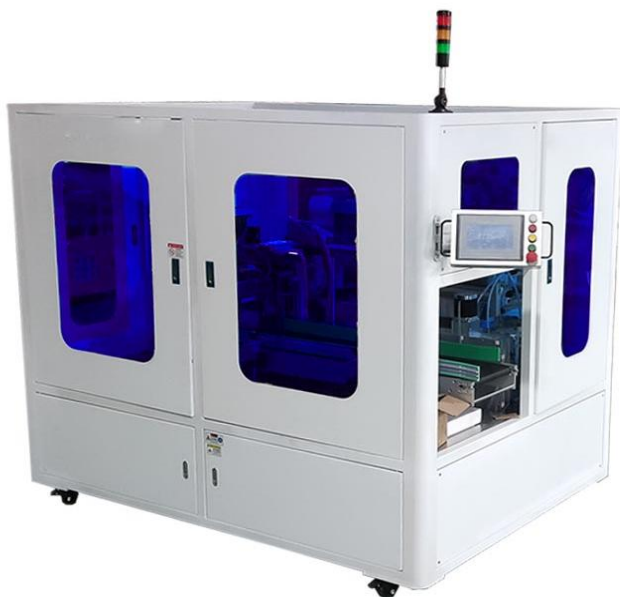

Parameters:

| Product name | Pre-made bag automatic bagging machine |
|-------------------------|--|
| Model | SPR-100M |
| Product size | Customize to request |
| bag size | w:100-250mm ;L:100-300mm |
| bag type | PE Flat bags, aluminum foil bags, composite bags |
| packing size | 10-20 bags/min |
| Applicable power supply | 380V/50HZ |
| Applicable air source | 0.6Mpa |
| Air consumption | 500L/min |
| power | 4kw |
| machine weight | 400Kg |
| machine size | L2537 x W1600 x H1800mm |
| Trial material | The items required during the debugging period shall be provided by the purchaser (PE bag500pcs、 sample for products 100pcs) |

Our equipment includes standard machines, customized machines, and models with optional functions.

Machine features:

1. It has the function of automatic feeding, automatic lifting, and hand-cranked adjustable width limit mechanism. It is easy to operate and packs efficiently.
2. The original flat bag heat sealing technology can better meet customers' requirements for bagging quality and different functions.

Machine features:

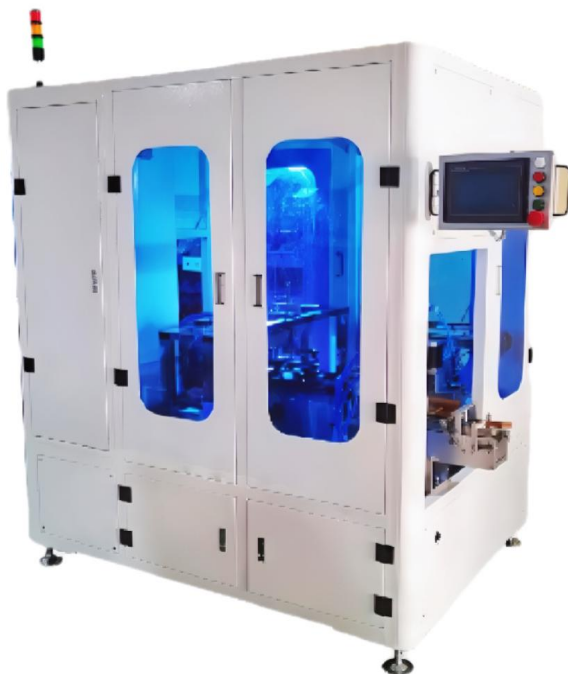

1. It has the function of conveying products and automatically opening bags. It detects when the packaging bags are delivered to the right place, and automatically alarms when there are no bags in the bag warehouse.
2. It has a high degree of automation, saves manpower, runs smoothly, and improves efficiency. The entire operating system is simple to use and easy to inspect and maintain.

Bagging machine is a common packaging equipment, widely used in various industries. It is mainly used to automatically put products into plastic bags, and seal and cut them. It is widely used in various industries, such as food, medicine, chemical industry, etc.

Parameters:

| Product name | Pre-made bag automatic bagging machine |
|-------------------------|--|
| Model | SPR-200M-RF |
| Product size | Customize to request |
| bag size | w:100-200mm ;L:100-350mm |
| bag type | PE Flat bags, aluminum foil bags, composite bags |
| packing size | 10-20 bags/min |
| Applicable power supply | 220V/50HZ |
| Applicable air source | 0.6Mpa |
| Air consumption | 500L/min |
| power | 4kw |
| machine weight | 400Kg |
| machine size | L2400x W1600 x H1800mm |
| Trial material | The items required during the debugging period shall be provided by the purchaser (PE bag500pcs、 sample for products 100pcs) |

Our equipment includes standard machines, customized machines, and models with optional functions.

Machine features:

1. Multi-servo control can realize fast switching of multiple functions, convenient and fast machine debugging, and excellent performance.
2. Original flat bag heat sealing technology can better meet customers' requirements for bagging quality and different functions.

Bagging machine is a common packaging equipment, widely used in various industries. It is mainly used to automatically put products into plastic bags, and seal and cut them. It is widely used in various industries, such as food, medicine, chemical industry, etc.

Parameters:

| Product name | Self-adhesive bag packing machine (single channel) |
|-------------------------|--|
| Model | SPR-200M-SD |
| Product size | Customize to request |
| bag size | Customize to request |
| bag type | OPP self-adhesive bag |
| packing size | 10-20 bags/min |
| Applicable power supply | 220V/50HZ |
| Applicable air source | 0.6Mpa |
| Air consumption | 500L/min |
| power | 4kw |
| machine weight | 400Kg |
| machine size | L2400 x W1600 x H1800mm |
| Trial material | The items required during the debugging period shall be provided by the purchaser (PE bag500pcs、 sample for products 100pcs) |
