

This type of strapping machine is a machine that wraps the product or package with strapping tape, then tightens it and connects the two ends by melting them through thermal effects or using buckles and other materials. The function of the strapping machine is to make the plastic tape close to the surface of the package being strapped, to ensure that the package does not fall apart during transportation and storage due to loose strapping, and at the same time, the strapping should be neat and beautiful.

Equipment features:

1. Start the machine and preheat for a few seconds to enter the strapping state, and it only takes 2.5 seconds to complete the strapping.
2. The three motors have high power, stable operation, high speed, and improved work efficiency.

Technical parameters:

Product name	Automatic Strapping Machine(Low Table)
Model	SPR-101B
Power source	AC380V, 50/60Hz, 1.0kW
Overall size	L1905mm×W628mm×H1850mm
Frame size	W800mm×H600mm (customized)
Table height	450mm
Tyingspeed	≤2.5second/strap
Bindingforce	0-60kg
Strappings pecifications	width 9-15 (±1) mm, thickness0.55-1.0 (±0.1) mm
Machine weight	270kg
Machine bearing	80kg

Our equipment includes standard machines, customized machines, and models with optional functions.
