

The luggage wrapping machine is specially designed for baggage wrapping at airports, so as to protect the baggage during transportation (to prevent damage and to prevent the baggage from being replaced). The equipment can be moved, and the operator puts the baggage on the turntable and adjusts the distance of the vertical rods according to the size of the baggage so that the baggage can be placed on the turntable stably. Then the operator presses the start button on the operation panel, and the equipment automatically wraps the baggage. Generally, 3-5 layers of baggage are enough, and the film is cut manually.

Equipment features:

1. The operator manually adjusts the vertical rod to ensure the safety and stability of the goods.
2. The operation is simple, and the number of winding circles and film tension can be directly adjusted on the operation panel

Technical parameters:

Product name	Luggage Wrapping Machine
Model	SPR-XL
Winding specification	L(250-1200)*W(200-400)*H(250-800)mm
package height	850mm
Load Bearing	60Kg
Turntable size	400mm
Table height	550mm
Rotary speed	0-20 pcs/Min
Packaging efficiency	25-40pallets/h
Winding film	LLDPE stretch film
Power supply voltage	1P 220V,50HZ

Our equipment includes standard machines, customized machines, and models with optional functions.
